Automation & Integrations Engineer · Full-Stack

SUMMARY

Automation engineer who takes manual process out of business operations — and builds the software around it. Configures **ATS and CRM platforms**, wires them together over **REST APIs and webhooks** in **n8n**, and ships the full-stack applications that feed them: manual data entry cut **80%**, screening cut from **3 days to same-day**, **100+ candidates** processed weekly, **11,368** documents digitized.

TECHNICAL SKILLS

Automation	n8n, workflow design, business process automation, third-party API integration, webhooks
Platforms	Manatal (ATS configuration), GoHighLevel (CRM configuration), Supabase, WordPress (Elementor)
Backend & Data	REST API design, authentication, webhooks, PostgreSQL, MySQL, Supabase
Languages & UI	TypeScript, JavaScript, SQL, React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, Zod
AI Engineering	Claude Code (full SDLC), MCP server development, Anthropic API, context engineering
Cloud & Testing	Vercel, Azure App Service, CI/CD, Git, GitHub, Vitest, Cypress, Postman

EXPERIENCE

VizServe Private Limited — Jan 2025 – Present

System Engineer I · Remote — Jan 2026 – Present
Associate System Developer — Jan 2025 – Jan 2026

Own delivery end-to-end — requirements, platform configuration, integration design, build, deploy, maintain.

Recruitment Process Automation & Manatal ATS — Sep 2025 – Jan 2026

Stack: n8n, Manatal ATS, REST APIs, webhooks, WordPress (Elementor)

- Configured Manatal ATS around company hiring workflows and built a WordPress application portal wired directly to its REST API — screening fell from **3 days to same-day** for **200+ monthly applicants** and manual data entry dropped **80%**.
- Automated background and reference checks in n8n, dispatching to **100+ candidates weekly** and lifting response rates **25%**.

GoHighLevel CRM Configuration & Integration

Stack: GoHighLevel, n8n, REST APIs, webhooks

- Configured GoHighLevel end-to-end — pipelines, opportunities, workflows, calendars, forms, funnels, snapshots, email and SMS campaigns, custom fields — and integrated it with n8n over its REST API and webhooks.

Online Admission System Revamp — HFSE International School — Jun 2025 – Present

Stack: Next.js, React, TypeScript, Supabase (PostgreSQL), TanStack Query, Zod, Tailwind CSS

- Replaced a legacy admissions portal with a self-service parent portal that has processed **1,539 enrollment applications** across 3 academic years and served **888 parents and guardians** in AY2025 alone.
- Removed manual staff follow-up on incomplete applications with a Pending Actions dashboard, auto-saved drafts and prior-year carry-over, digitizing **11,368 document uploads** behind validated submissions.

Student Information System — Apr 2026 – Present

Stack: Next.js, React, TypeScript, PostgreSQL, Supabase

- Consolidated spreadsheet-based school operations into one platform and automated report card production — teachers enter raw scores, the system computes grades and renders the printable card, collapsing a **multi-day per-term process to minutes**.

HFSE Web Properties & Online Store — 2025 – Present

Stack: WordPress, Elementor, HitPay, Manatal REST API

- Redesigned the school's main website and built the HFSE GEG careers portal at careers.hfse.edu.sg, whose Elementor application form posts applicants straight into Manatal — no application is re-keyed by hand.
- Launched a HitPay storefront and inventory for the group's uniform and supplies shop — 7 product categories with cart, search and checkout — and designed the store page — families now order and pay online (hapistore.hfse.edu.sg).

Production integrations: GoHighLevel, Manatal, Supabase, Anthropic, Cloudinary, Microsoft Outlook, Discord, Resend, Calendly, ClickUp and Fathom AI — over REST APIs and webhooks.

AI-augmented delivery: Run the full SDLC in Claude Code, and built a custom Fathom AI MCP server that pipes meeting notes and action items into development and code review.

Lamina Studios — Frontend Developer Intern — Jan 2024 – May 2024

Built a Laravel driver and helper registration system with multi-step forms, draft persistence and validation — sign-up moved off paper and submissions arrived complete.

EDUCATION & CERTIFICATIONS

Laguna University — BS Information Technology — Aug 2019 – Jul 2024

Building RAG Apps Using MongoDB, MongoDB · JavaScript Essentials 1, Cisco — Oct 2026

Frontend Developer Training Program, Codebility — Jul – Dec 2024
