Full-Stack Software Engineer · Automation & AI

SUMMARY

Full-stack engineer who takes systems from stakeholder requirements to production — architecture, build, test, deploy, maintain. Ships on **TypeScript**, **React / Next.js** and **PostgreSQL / Supabase**, replacing manual process with software: **1,539** enrollment applications processed, **11,368** documents digitized, manual data entry cut **80%**. Works AI through the full SDLC and builds custom developer tooling.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, SQL, Shell scripting (basic)
Frontend	React, Next.js, Vite, Tailwind CSS, shadcn/ui, Zustand, TanStack Query, React Hook Form, Zod
Backend & Data	REST API design, authentication, webhooks, PostgreSQL, MySQL, Supabase
Cloud & Testing	Vercel, Azure App Service, CI/CD, Git, GitHub, Vitest, Cypress, Postman
AI Engineering	Claude Code (full SDLC), MCP server development, Anthropic API, context engineering, LLM integration
Automation & CMS	n8n, GoHighLevel (CRM), Manatal (ATS), business process automation, WordPress (Elementor)

EXPERIENCE

VizServe Private Limited — Jan 2025 – Present

System Engineer I · Remote — Jan 2026 – Present
Associate System Developer — Jan 2025 – Jan 2026

Own delivery of three production systems end-to-end — stakeholder requirements, architecture and stack selection, phased build, testing, deployment, and maintenance.

Online Admission System Revamp — HFSE International School — Jun 2025 – Present

Stack: Next.js, React, TypeScript, Supabase (PostgreSQL), TanStack Query, React Hook Form, Zod, Tailwind CSS, shadcn/ui

- Replaced a legacy admissions portal with a self-service parent portal that has processed **1,539 enrollment applications** across 3 academic years and served **888 parents and guardians** in AY2025 alone.
- Digitized **11,368 document uploads** behind validated submissions (file type and size checks, server-side PDF merging) and a Pending Actions dashboard that removed manual staff follow-up on incomplete applications.
- Eliminated repeat data entry across 4 enrollment flows with auto-saved drafts and prior-year carry-over, reducing re-enrollment to a review-and-confirm step.

Student Information System — Apr 2026 – Present

Stack: Next.js, React, TypeScript, PostgreSQL, Supabase, Zod

- Consolidated spreadsheet-based school operations into one platform — admissions, student records, grades, attendance and parent access working off a single student record — used daily by teachers, admin staff and parents.
- Automated report card production: teachers enter raw scores, the system computes grades and renders the printable card, collapsing a **multi-day per-term process to minutes** and removing errors that previously reached parents.

Recruitment Process Automation & Manatal ATS — Sep 2025 – Jan 2026

Stack: n8n, Manatal ATS, REST APIs, webhooks, WordPress (Elementor)

- Configured Manatal ATS around company hiring workflows and built a WordPress portal wired to its REST API — screening fell from **3 days to same-day** for **200+ monthly applicants** and manual data entry dropped **80%**.
- Automated background and reference checks in n8n, dispatching to **100+ candidates weekly** and lifting response rates **25%**.

HFSE Web Properties & Online Store — 2025 – Present

Stack: WordPress, Elementor, HitPay, Manatal REST API

- Redesigned the school's main website and built the HFSE GEG careers portal at careers.hfse.edu.sg, whose Elementor application form posts applicants straight into Manatal — no application is re-keyed by hand.
- Launched a HitPay storefront and inventory for the group's uniform and supplies shop — 7 product categories with cart, search and checkout — and designed the store page — families now order and pay online (hapistore.hfse.edu.sg).

Production integrations: GoHighLevel, Manatal, Supabase, Anthropic, Cloudinary, Microsoft Outlook, Discord, Resend, Calendly, ClickUp and Fathom AI — over REST APIs and webhooks.

AI-augmented delivery: Run the full SDLC in Claude Code and built a custom Fathom AI MCP server that pipes meeting notes and action items straight into development and code review.

Lamina Studios — Frontend Developer Intern — Jan 2024 – May 2024

Built a Laravel driver and helper registration system with multi-step forms, draft persistence and validation — sign-up moved off paper and submissions arrived complete.

EDUCATION & CERTIFICATIONS

Laguna University — BS Information Technology — Aug 2019 – Jul 2024

Building RAG Apps Using MongoDB, MongoDB · JavaScript Essentials 1, Cisco — Oct 2026

Frontend Developer Training Program, Codebility — Jul – Dec 2024
